SUMMARY

The evidences of biological activity of 6 *Persicaria* species (*P. amphibia*, *P. hydropiper*, *P. lapathifolia*, *P. maculata*, *P. minor*, *P. scabra*) and 3 *Polygonum* species (*P. aviculare*, *P. calcatum*, *P. patulum*) were presented in this review. The data were obtained in the experiments conducted in the last decade. The hypolipidemic, antifibrotic, antitumor, oestrogen-like, antifungal and other kinds of activity were not noted previously for these species in Russian reference literature.

Key words: *Persicaria*, *Polygonum*, biological activity.
